

Data Scoping Project: Evaluation Form

Biological data collections relating to Scotland held by Dundee Art Galleries & Museums
and the University of Dundee

The purpose of this project was to act as a pilot study to establish the quantity of useful biodiversity data held by Scottish museums and universities, much of which are not currently part of any national recording process. This project aims to publicise the availability of, and widen access to such information.

As a pilot study, an additional objective of the project was to identify the procedures and limitations inherent in such a study, with the aim to inform future efforts of a similar nature.

-
1. What information included in the report did you consider to be most helpful?

2. Did you feel that any necessary information was missing from the datasets and/or the accompanying report?

3. To what degree did you find the included datasets clear and understandable?

4. How would you use the information provided in the report?

5. Would your organisation find it useful to take part in a similar project?

6. Do you have any other additional comments or suggestions?

BRISC would like to thank you for your feedback.
